VIRUSTOTAL API v3 TEST SUITE

Multi-Usecase Verification Benchmark for File Hash & URL Threat Intelligence

API Integration Under Test: VirusTotal REST API v3 (https://www.virustotal.com/api/v3)

Configuration: Enter your key in Settings > API Keys > 'VirusTotal API Key' or set VIRUSTOTAL_API_KEY in .env

FileSanitizer automatically queries file hashes at /files/{hash} and discovered URLs at /urls/{id}.

USECASE 1: KNOWN MALICIOUS URL ON VIRUSTOTAL

MALICIOUS

URL Target: http://evil.com/payload.exe

Verified malicious endpoint in VirusTotal database flagged by multiple security vendors.

Expected Result: reputation.virus_total = 'MALICIOUS', risk = 'MALICIOUS', vendor detection count indicator.

VirusTotal Web Report: https://www.virustotal.com/gui/search/http%3A%2F%2Fevil.com%2Fpayload.exe

USECASE 2: SUSPICIOUS / PHISHING TEST ENDPOINT

SUSPICIOUS

URL Target: http://testsafebrowsing.appspot.com/s/phishing.html

Known test endpoint triggering phishing heuristics and credential harvesting detection engines.

Expected Result: reputation.virus_total = 'SUSPICIOUS', risk = 'HIGH RISK', phishing warning indicator.

VirusTotal Web Report: https://www.virustotal.com/gui/search/http%3A%2F%2Ftestsafebrowsing.appspot.com%2Fs%2Fphishing.html

USECASE 3: BENIGN HIGH-REPUTATION DOMAIN (CLEAN)

CLEAN

URL Target: https://www.virustotal.com

Official VirusTotal homepage evaluated as clean by 90+ security vendors without false positives.

Expected Result: reputation.virus_total = 'CLEAN', risk = 'CLEAN', zero positive detections.

VirusTotal Web Report: https://www.virustotal.com/gui/search/https%3A%2F%2Fwww.virustotal.com

USECASE 4: POPULAR SEARCH & INFORMATION INFRASTRUCTURE

CLEAN

URL Target: https://www.google.com

Clean major web portal validating TLS certificate inspection and headless browser screenshotting.

Expected Result: reputation.virus_total = 'CLEAN', TLSv1.3 valid, screenshot successfully captured.

VirusTotal Web Report: https://www.virustotal.com/gui/search/https%3A%2F%2Fwww.google.com

USECASE 5: FILE HASH DIRECT LOOKUP & INTEGRATION

Upon upload, FileSanitizer calculates SHA-256 and MD5 hashes, then issues a query to /api/v3/files/{sha256}.

If flagged on VirusTotal, positive vendor counts are highlighted and a clickable GUI link is created in the findings.

Interactive Discovered URLs table includes direct VirusTotal search buttons for immediate analyst triage.
